Question:
Does the paper mention white collar workers?
Answer:
Yes, the paper mentions white collar workers. Specifically, in Section **??**, the paper states:

"Our findings reveal that around 80% of the U.S. workforce could have at least 10% of their work tasks affected by the introduction of LLMs, while approximately 19% of workers may see at least 50% of their tasks impacted. We do not make predictions about the development or adoption timeline of such LLMs. The projected effects span all wage levels, with higher-income jobs potentially facing greater exposure to LLM capabilities and LLM-powered software."

Since white collar workers typically have higher wages and involve cognitive, non-routine tasks, this suggests that white collar workers are likely to experience substantial exposure to LLMs and LLM-powered software according to the paper's analysis.
